SUMMARY

Fresher and MCA graduate (2025) focused on AI and backend engineering, with hands-on experience building and deploying end-to-end projects across LLM agents, RAG pipelines, and AI evaluation tooling using Python, FastAPI, LangGraph, PostgreSQL, and AWS. Seeking an entry-level Software Engineer / AI Engineer role.

TECHNICAL SKILLS

Languages: Python, SQL, TypeScript, JavaScript
AI & LLM: LLM APIs (OpenAI GPT-4o, Anthropic Claude, Groq), RAG, LangChain, LangGraph, AI Agents, Tool/Function Calling, Prompt Engineering, Agent Trajectory Evaluation, LLM-as-Judge Calibration, Embeddings (sentence-transformers), FAISS, Pinecone
Backend & Data: FastAPI, REST API Design, Pydantic, SQLAlchemy, Alembic, arq, Multi-Tenant Architecture, Row-Level Security, PostgreSQL, Redis, Supabase, DynamoDB, Next.js
Cloud & DevOps: AWS (Lambda, ECS, Step Functions, SQS/SNS, S3, RDS, CloudWatch), Docker, OpenTelemetry, GitHub Actions, CI/CD, Railway, Vercel, Git
Testing & Stats: pytest, Braintrust, OpenAPI/Swagger, NumPy, Pandas, paired bootstrap, McNemar, ML evaluation metrics

PROJECTS

AI SDR (Davis)

Tech Stack: *FastAPI, LangGraph, OpenAI, Pinecone, Supabase Postgres, Redis, arq, Next.js 16, TypeScript, Braintrust*
GitHub: github.com/IlaKhan17/AI-Sales-Development-Representative **Live Demo:** davis.ilarehman.com

- Built an **evidence-grounded AI SDR agent** that attaches a source URL, snippet, and confidence score to every prospect claim, restricting email drafting to approved claims so unverified personalization is unreachable by construction.
- Separated LLM signal extraction from a **deterministic Python scorer** over **6** weighted ICP dimensions covered by **13** unit tests, turning untestable model output into logic where identical inputs always score the same.
- Shipped an **approval-first send pipeline** with a **6**-rule policy guard and Gmail idempotency keys, making duplicate sends structurally impossible and blocking any send the workspace has suppressed or rate-capped.
- Gated every pull request on **46** backend tests and **4** eval suites, holding deterministic ranking and policy suites at **100%** and reply classification at **1.0** unsubscribe recall across **12** intents.

Proofstep

Tech Stack: *Python 3.12, PostgreSQL, Redis, MinIO, OpenTelemetry, Docker, GitHub Actions, Apache-2.0*
GitHub: github.com/IlaKhan17/proofstep **Live Demo:** proofstep.ilarehman.com

- Built an evaluation CI platform for production AI agents that grades the **full tool-call trajectory** instead of the final output, enforcing policy-as-code YAML rules and attributing every failure to its offending span.
- Made CI gates **statistically honest** with paired bootstrap and McNemar tests plus Holm correction, erroring when a run is too small to detect the regression it claims to guard instead of passing on noise.
- Shipped it **self-hostable and multi-tenant** with row-level security and OpenTelemetry ingestion, publishing **2** packages to PyPI and **10** reference suites where **60%** of metrics are deterministic or statistical, not LLM-judged.

AdaptQuiz API

Tech Stack: *FastAPI, LangChain, FAISS, sentence-transformers, GPT-4o, Pydantic v2, Docker, Railway*
GitHub: github.com/IlaKhan17/adaptquiz-api **Live Demo:** adaptquiz.ilarehman.com

- Built and deployed a **6**-endpoint FastAPI service that turns any PDF into an adaptive quiz across **4** question types, grounding every question in retrieved source chunks so nothing is hallucinated.
- Added a GPT-4o judge scoring free-text answers on a **3**-criterion rubric with partial credit and knowledge-gap tags, running retrieval on local **384**-dimension embeddings to hold embedding API cost at **$0**.
- Aggregated per-answer knowledge-gap tags into a session report with a letter grade and the **top 5** ranked gaps, turning a raw quiz score into a targeted study plan.

EDUCATION

Indira Gandhi National Open University **2022 - 2025**
Master of Computer Applications (MCA) *New Delhi, India*

Jamia Millia Islamia **2017 - 2020**
Bachelor of Science *New Delhi, India*
